

affirmation in support of the claim
for trespass harms against mankind by horizontal transmission

2/28/2026

To Whom It May Concern;

I have spent 4 decades studying how electromagnetics, environment, foods, air, toxins and such affect health, the body, the soul, and our general experience of this life on earth. I have seen people who are negatively impacted by certain stimuli and environment factors that others do not detect as a negative to their own body. This lack of response by some does not validate universal application of the administration of electromagnetic energies or other perturbations of the natural order in the world or environment as in the use of cell phones, wandering, scanning and such at the entrance of a government building. One may relate to this when reflecting upon the known causal vector of even the slight components of a peanut being in the air causing anaphylaxis. It sometimes occurs that someone in the back of the plane could open a peanut snack and someone in the front of the plane not be able to breathe due to the allergic anaphylaxis. Similarly some people respond to electromagnetic stimuli or the shedding of the proteins generated in the body of people who have received the COVID so-called vaccine.

Having been trained in naturopathy and with a Bachelor's of Science in Biology, it is clear to me that due diligence to prove the COVID injections (that were promoted as vaccines) and treatments were abandoned even to the point that it seems a conspiracy to commit mass murder and to create a genetic modification in the survivors of the injection. These views are making their way into the courts as people have realized that this egregious COVID response plan has harmed many people, and was likely structured to cause such harm.

i do respectfully pray that each man and woman involved in this matter do return to honor.
